ACKNOWLEDGEMENTS

This thesis is the result of a joyful collaboration between people at the UMCG and the University of Groningen, whilst I had quite a lot of great experiences and learning. It is my pleasure to thank the following people (and apologize in advance to anyone I may have overlooked):

- First and foremost I want to thank Jos Roerdink for giving me the opportunity to shape my thesis under his supervision and to learn a lot about visualization. Also, thanks for giving me the great opportunity to interact with other researchers. Among other pleasant memories, Jos picking us (Iris, Enoc and I) up at the Groningen train station in a very cold night (at least for three mexican newcomers) on March 25th, 2014, will remain as a vivid memory for a long time.
- Special thanks to Natasha Maurits for her ideas, time, effort, corrections, and constructive comments that really improved the quality of this research.
- I would like to express my sincere thanks to Claudine Lamoth for introducing me to the fields of exergames and human movement, and for providing rich exergaming datasets which I enjoyed exploring, visualizing and fitting statistical models.
- Jasper van de Gronde for his suggestions to improve the visualizations in this thesis, for his critical comments regarding manuscripts and for always being available to discuss all sorts of questions.
- The assessment committee for their useful comments to improve this thesis.
- I wish to thank Mike van Diest for kindly sharing the exergaming data, that he collected during his own research.
- I also want to thank my colleague and friend Octavio Martínez Manzanera who provided the finger-to-nose data and constructive comments to improve Chapter 5.
- Colleagues from the SVCG for listening to my presentations, providing meaningful feedback, in general for making a pleasant environment for research.
- In particular Dutch people at the JBI for their patience, always helping me with Dutch or any other matter, interpreting letters,

emails and webpages, these details made my stay easier and more comfortable at Groningen.

- Colleagues from the clinical neuro-engineering group at the UMCG for attending to my presentations, organizing breakfasts, dinners and borrels which I enjoyed very much.
- Now I would like to thank my family in Spanish. Antes que nada quiero agradecer a Iris por acompañarme en esta gran aventura, por confiar en mí, escucharme y hasta leer mis artículos y corregir detalles.
- A Enoc, aún siendo muy pequeño, por permitirme (en momentos cruciales) probar modelos estadísticos, redactar artículos y/o ajustar figuras en casa, cuando debimos pasar grandes momentos armando rompecabezas, vías de trenes, pistas de autos o leyendo cuentos (impagable).
- A mi **madre** por su sacrificio, fortaleza y determinación para buscar que sus hijos tuvieran un futuro mejor.
- A mi padre por llevarnos a la gran ciudad llena de oportunidades y tentaciones.
- A mis hermanos Paula y Dionisio por cuidar, estar cerca de mis padres y por estar siempre disponibles.
- A Leobardo por ser, en muchos sentidos, un hermano ejemplar.

I would also like to thank the Mexican National Council of Science and Technology (CONACYT) for the financial support, and the University of Groningen for the additional allowance.

COLOPHON

This document was typeset using the typographical look-and-feel `classicthesis` developed by André Miede. The style was inspired by Robert Bringhurst’s seminal book on typography “*The Elements of Typographic Style*”. `classicthesis` is available for both \LaTeX and \LyX :

<http://code.google.com/p/classicthesis/>

Final Version as of February 15, 2018 (`classicthesis`).
